Area of improvement

- *Add notification feature*
- *Add searching feature*

- *Use color theory*
- *simple navigation*

Areas of difficulties encounter during the web design

1-Storing the pictures in the database and Retrieve it.

2- working with google maps api

3- SQL server faced a couple of errors wich spends more time to be fixed and continue working on the project.

4- Delay in getting information (time constraint).

5- assigning data type for some attribute such as image and location.

the taken approach was assign them as varchar.
